

Replacement Naval Hospital Camp Pendleton Coming in December 2013

Spring 2013

The new 500,000 SF, 4 story, state-of-the-art facility will be fully operational in December 2013!

Replacement Naval Hospital Camp Pendleton will support a patient population of roughly 157,000 with a staff of approximately 2,400 military and civilian personnel. The hospital will feature state-of-the-art equipment and increased accessibility, including a helipad providing outbound medical evacuation via air. A new MRI machine and an extremity MRI machine for arms, hands, feet, and legs will be located inside of the hospital for patient convenience and comfort.

More than 2,500 new parking spaces are being added under the scope of this project. New surface lots and a 4 story, 1,500 space, parking garage are being constructed. A pedestrian bridge will connect the parking structure to the 2nd floor of the hospital for direct access to common outpatient clinics. Additional construction includes a central utilities plant (CUP), that is equipped to sustain full hospital operations for 96 hours in the event of a natural disaster. The CUP will provide day-to-day heating/cooling services to the hospital.

The Replacement Naval Hospital Camp Pendleton Project employs between 500 and 1,000 construction workers daily.

We would like to thank everyone who contributes daily to the success of this project. Not only contractors, but also the support staff behind the scenes. Without their dedication we would not be where we are today. We would also like to thank our patients for their understanding and patience during our time of transition. We look forward to continuing our tradition of exceptional patient care in our new state-of-the-art facility!

The replacement hospital features interiors that were designed to promote a healing and calming environment. The sun filled atrium, central courtyard, and healing garden create natural and serene environments for patients and their families. A 1.2 mile walking path will surround the hospital compound. The path will feature 20 pieces of exercise equipment at 6 stations to promote health and wellness. A path leading to the South Mesa Club will also be constructed to the east of the hospital.

LEED® is the internationally recognized green bldg. certification system that is designed to promote a whole-building approach to environmental sustainability. The Replacement Naval Hospital Camp Pendleton project is projected to earn LEED® Gold certification. This achievement will be realized due to the implementation of various green building design features, including but not limited to: green roofs, solar cells, horizontal and vertical sun screens, maximized use of recycled materials, and low-flow plumbing fixtures. All of these features will reduce overall hospital energy consumption. ♦

The replacement hospital is located near the Camp Pendleton main gate entrance, at the I-5 Oceanside corridor. Evidence based design criteria was utilized to create logical floor plans and improve operational efficiencies. The emergency department will have a dedicated entrance with easy drive-up and dedicated parking. The Replacement Naval Hospital will also have an on-site Pharmacy that provides patients with convenient access to medications.

Fun Facts About The Replacement Hospital Construction

The 4 floor, 500,000 SF facility will be larger than the 435,600 SF San Diego Zoo when complete.

Structural Steel: Replacement Naval Hospital Camp Pendleton contains 4000 tons of steel. The weight of structural steel utilized is equivalent to the weight of approximately 20 blue whales.

Stone: The exterior of the facility contains 28,594 SF of stone. This is the equivalent of approximately 6 NBA basketball courts covered in stone.

Concrete: The structure of the replacement hospital contains over 18,000 cubic yards of concrete. This is the equivalent of approximately 5.5 olympic swimming pools full of concrete.

Window Systems: Replacement Naval Hospital Camp Pendleton boasts 92,000 SF of Window Systems. This is approximately 1.5 times the total square footage of the White House.

Terra Cotta: The exterior finish of the facility contains 50,701 SF of terra cotta. This is enough terra cotta to cover approximately 2 times the square footage of the Lincoln Memorial.

Metal Panels: The exterior finish of the replacement hospital contains 87,500 SF of metal panels. This is enough metal paneling to cover the entire Washington Monument.

Replacement NHCP Floor Layout

1st Floor: Quarter Deck, Security, Orthopedics, Pharmacy, Emergency, Radiology, Dining Hall/ Galley, Physical Therapy, Urology, TRICARE, and Medical Records.

2nd Floor: Chapel, OB/GYN Clinic, Ophthalmology, Optometry, Family Medicine, and Pediatrics.

3rd Floor: APU (Same Day Surgery), ICU, Post Ambulatory Care Unit, Main OR, Labor / Delivery, Nursery, Post-Partum, Multi Service Ward, Referral Management, and Case Management.

4th Floor: Command Suite, ENT/Audiology, Education and Training, Medical Library, Occupational Health, Preventive Medicine, and Dental Services.
