Learning Objectives

- Describe the steps for sexual partner services (a.k.a. “contact investigation”)
- Understand the resources available to help with conducting sexual partner services

DoD Requirements

- **Navy SECNAVINST 5300.30 – HIV, HBV and HCV**
 - <http://doni.daps.dla.mil/Directives/05000%20General%20Management%20Security%20and%20Safety%20Services/05300%20Manpower%20Personnel%20Support/5300.30E.pdf>
- **Navy BUMEDINST 6222.10 – Management and Prevention of STIs**
 - <http://www.med.navy.mil/directives/ExternalDirectives/6222.10C.pdf>
- **Army Pamphlet 40-11 – Preventive Medicine**
 - http://armypubs.army.mil/epubs/pdf/p40_11.pdf
- **Army Regulation 600-110 - HIV**
 - http://www.apd.army.mil/pdf/files/r600_110.pdf
- **Air Force Instruction 48-105 – Surv., prevention, and control of diseases and conditions of PH or Mil significance**
 - http://static.e-publishing.af.mil/production/1/af_ja/publication/afi48-105/afi48-105.pdf
- **Air Force Instruction 48-135 – HIV**
 - http://static.e-publishing.af.mil/production/1/af_ja/publication/afi48-135/afi48-135.pdf
- **Coast Guard COMDTINST M6000.1**
 - <http://www.uscg.mil/health/cg1121/docs/pdf/cim6000.1e.pdf>
- **Coast Guard COMDTINST 6230.9 – HIV**
 - http://www.uscg.mil/directives/cim/6000-6999/CIM_6230_9.PDF

- Other sexual health policies
- Idealized STI Patient Flow Diagram

2. HIV-STI Prevention Counseling

Each patient diagnosed with, or identified as being at risk for HIV (including HIV), should receive intensive prevention counseling.

- Prevention Counseling Desk-top Assistant. This document provides the evidence-based RESPECT model.
- Navy Training Film "HIV-STI Prevention: Working with the STI Partner" the 6 steps of working with the STI Partner.
- Condom skills counseling video (HIV Prevention).
- Interview Form (CDC). This document provides the structure for the counseling session. This worksheet is used to document the counseling and the Contact Notification Form.

3. HIV-STI Sexual Partner Services

Recent sexual partners of patients infected with HIV should be identified and be offered testing and treatment.

- Student Manual . This document provides the structure for the counseling session. This worksheet is used to document the counseling and the Contact Notification Form.
- Table of Interview Periods . This document provides the structure for the counseling session. This worksheet is used to document the counseling and the Contact Notification Form.
- Sexual Partner Services Desk-top Assistant. This document provides the structure for the counseling session. This worksheet is used to document the counseling and the Contact Notification Form.

Passport to Partner Services Track X

ITINERARY

- ▶ Key Disease Concepts
- ▶ Introduction to Partner Services for Partner Services Providers
- ▶ Communication Skills
- ▣ Interviewing
- ▣ Field Investigation and Notification
- ▣ Syphilis Case Management and VCA
- ▣ Referrals and Linkage to Care
- ▣ The Lot System

Description of "Tracks"

Track A

For medical providers and other referring providers who refer patients to a Partner Services Program.

Includes: 1 online module (CME, CNE, CHES credit), other modules are optional

Track B

For those who conduct elicitation and referral primarily for HIV, with limited or no notification.

Includes: 13 online modules and a 3-day instructor-led course

Track C

For those who conduct elicitation and/or notification and referral for Gonorrhea, Chlamydia, HIV, and Syphilis (excludes Syphilis case management and VCA).

Includes: 13 online modules and a 3-day instructor-led course

Track D

For those who conduct full spectrum of Partner Services- interviewing; elicitation; notification and referral; Syphilis case management; and, Visual Case Analysis (VCA).

Includes: 14 online modules, VCA E3 webinar series, Lot System module (optional), and a 5-day instructor-led course

Partner Services for Medical Providers and Referring Providers

TOPIC MENU

- Introduction/Overview
- Goals, Key Elements and Principles of Partner Services
- Partner Services Referral Strategies and Roles
- Perceived Benefits/Concerns and Acceptability of Partner Services
- Evidence-Based Research
- Introducing Partner Services to Patients
- Legal Basis and Considerations

[Back to Last Page Visited](#)

Evidence of Effectiveness

- **Provider Notification** - In 2010, IOM Committee on HIV Screening and Access to Care, in HIV Screening and Access to Care: *Exploring Barriers and Facilitators to Expanded HIV Testing* found:
 - “Partner notification has been found to be effective for identification of persons with previously undiagnosed HIV infection. Partner notification is a key component of partner services that involves confidential notification of the sexual and needle sharing partners of HIV infected individuals of possible exposure. A systematic review of studies conducted among a variety of populations for **the Task Force on Community Preventive Services** showed that between 14 and 26 percent of tested partners of individuals with HIV were found to have undiagnosed HIV . Based on these findings, the Task Force currently classifies the evidence as sufficient to recommend provider referral partner notification. Partner services, including partner notification, also have the benefit of providing an opportunity to reach persons who are HIV-negative but who are at very high risk for HIV to make them aware of their risk and offer prevention services.”
- **Expedited Partner Therapy** – “Both clinical and behavioral outcomes of the available studies indicate that EPT is a useful option to facilitate partner management among heterosexual men and women with chlamydial infection or gonorrhea. The evidence indicates that EPT should be available to clinicians as an option for partner management, although ongoing evaluation will be needed to define when and how EPT can be best utilized. EPT represents an additional strategy for partner management that does not replace other strategies, such as standard patient referral or provider-assisted referral, when available.” Source: <http://www.cdc.gov/std/treatment/eptfinalreport2006.pdf>

Purpose of Partner Services

prevention activity to help partners:

- avoid infection if not infected
- prevent transmission to others (including reinfection of the index client) if infected
- gain access to counseling, testing, treatment and other services

Process of Partner Services

- work with infected patients to:
 - identify sex and/or needle-sharing partners
 - locate partners
 - notify partners that they have been exposed
 - offer counseling, testing, treatment and referrals.

Concepts

- Always conducted in conjunction with risk-reduction counseling
- Voluntary
- Must Protect Confidentiality
- On-Going

Which Partners to Notify?

- Within Contract Tracing Window
- “Named” partners. Plus:
 - Cluster contacts (1 Syphilis only)
 - HIV spouse
 - “Duty to warn” partner
- Partners of patients - not partners of partners
- Reliable/high quality data
- Policy of target jurisdiction

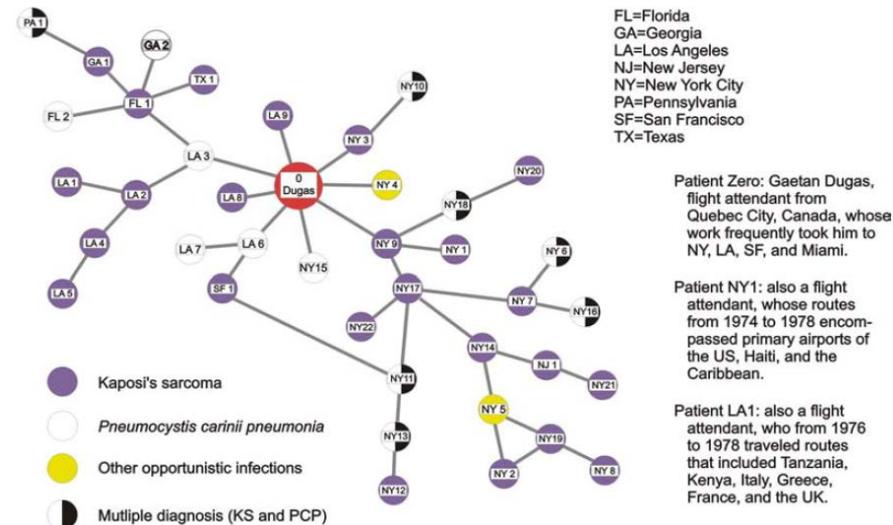

Table 1 - Interview Periods

based on
 CDC STD Treatment Guidelines 2010; MMWR 59; RR-12
 CDC Partner Services Guide 2008; MMWR 57; 30 Oct 2008
 CDC Partner Counseling and Referral Services Trainers Manual, 2002, page T4-17,18
 SECNAVINST 5300.30E, Management of HIV in the Navy and Marine Corps, Aug 2012

Chancroid	10 days preceding onset
Chlamydia	60 days before onset (or date of specimen collection if asymptomatic); or most recent partner if >60 days
Genital Herpes	current sex partners can benefit from evaluation and counseling
Gonorrhea	60 days before onset (or date of specimen collection if asymptomatic); or most recent partner if >60 days
Granuloma Inguinale	60 days
Hepatitis B, acute	Vaccinate partners if within 14 days after the sexual exposure. The interval during which post-sexual-exposure prophylactic vaccination is effective is unlikely to exceed 14 days.
Hepatitis B, chronic	No contact time period specified. Minimally, current sexual partners, needle-sharing partners and non-sexual household contacts should be offered hepatitis B vaccine.
Hepatitis C	Patient should discuss the low but present risk of sexual transmission with their partners and discuss the need for counseling and testing.
HIV	1 or 2 years before date of first positive HIV test through date of interview; might be mitigated by evidence of recent infection or availability of verified previous negative test results. <u>Spouses</u> : SECNAVINST 5300.30E requires that spouses of HIV positive reserve component members be provided notification, counseling, and testing.
Human Papillomavirus (genital warts)	Patients with genital warts should inform current sex partners because the warts can be transmitted to other partners.
PID	60 days or most recent partner if >60 days
Pubic lice	one month
Lymphogranuloma Venereum	60 days
Nongonococcal Urethritis	60 days
Scabies	one month
Syphilis, primary	3 months plus duration of symptoms
Syphilis, secondary	6 months plus duration of symptoms
Syphilis, early latent	1 year before start of treatment
Trichomoniasis	"sex partners should be treated"

High Priority Partners

CDC recommends these partners be placed at the **highest priority for notification** of exposure to HIV:

- Partners who have been exposed within the past 72 hours and might be candidates for non-occupational post-exposure prophylaxis (PEP).
- Partners who are more likely to have become infected with HIV:
 - Partners of index patients who are known to have a high HIV viral load.
 - Partners of index patients who are known to have acute HIV infection.
 - Partners of index patients who had another STI at the time of exposure or partners who might have had another STI themselves at that time.
- Partners who, if infected, are more likely to transmit HIV to others include partners whose earliest known exposure has been within the past 3 months. Studies suggest that the incubation period for HIV infection (time from infection to acute retroviral syndrome) ranges from 5 to 75 days, that serum viral load is likely to be highest in the month after infection, and that viral load in seminal and cervico-vaginal fluid is likely to be highest in the first 2 months after infection. Therefore, partners who are likely to have been infected within the previous 3 months might be more likely to spread HIV to others.

Partner Services: Options

- Client Referral
- Provider Referral (Preventive Med or Public Health)
 - Third Party Referral (clinician)
- Contract Referral
- Dual Referral
- Other Options:
 - Internet PS : grindr, adam-4-adam, manhunt
 - INSPOT (<http://www.inspot.org>)
 - Expedited Partner Therapy

WHEN EPT IS NOT APPROPRIATE

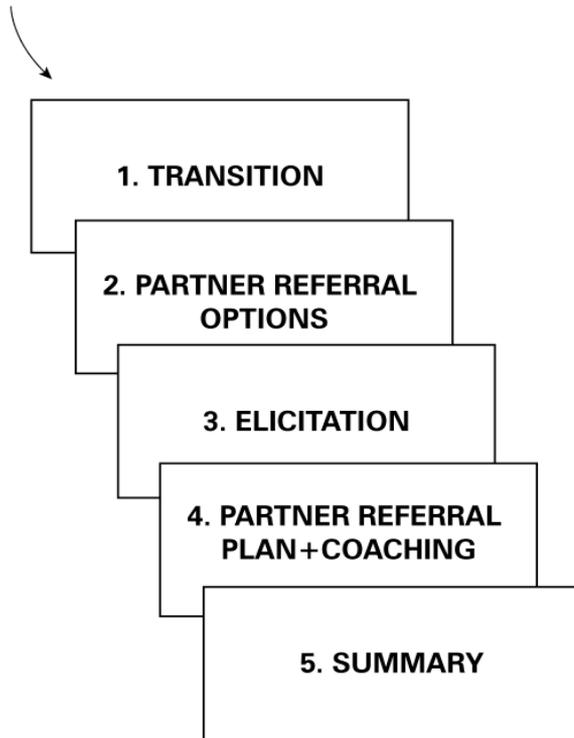

- In cases of suspected sexual assault or abuse; or a situation in which the patient's safety is in doubt.
- For patients co-infected with STIs not covered by EPT medication.
- Providers should assess the partner's symptom status, particularly symptoms indicative of a complicated infection. Partners who have symptoms of a more serious infection (e.g., pelvic pain in women, testicular pain in men, or fever in women or men) are not appropriate candidates for EPT.
- For partners with known severe allergies to antibiotics.
- For men that have sex with men.

Special Issues

- Limits to Privacy
 - Potential for discovery of patient's identity by a partner
 - Duty or Privilege to Warn
 - HIV - spouse
 - Current identifiable partner
 - Persistent risk behavior and future partners
 - Child abuse
 - Threats to harm oneself or another
- Potential for Violence
- Youth
- Collaboration between field PrevMed and HETUs re: HIV

Record Keeping

- No Navy, Army or USAF directives for specific forms
 - Coast Guard: COMDTINST M6000.1 specifies CDC Contact Interview Record
- Document efforts to notify partners and outcomes
 - State form or CDC Interview Form
- Keep copy of forms sent to other jurisdictions
 - State form or CDC Field record
- Records kept locked and inaccessible to unauthorized view
- Testing, treatment, vaccination and counseling of a each partner should be recorded in that person's official medical record.
- Partner identity is not documented in patient medical records.
- Partner names and patient names are recorded on separate documents, with only a case number or code linking the two
- Partner and risk data may be entered into NDRSi (DRSi)
- SECNAV M-5210.1 requires communicable disease official documents to be maintained for 5 years and "working files" to be destroyed (CDC recommends shredding) when the information has been summarized in formal reports.
