Exercising After Pregnancy

Is it Safe to Exercise After Giving Birth?

Yes! It is safe to exercise after giving birth except in a few rare circumstances. Regular activity promotes health benefits in all stages of life. Service women with uncomplicated pregnancies are **encouraged to engage in aerobic (cardio) and strength-conditioning exercises before, during, and after pregnancy.** It is important to **talk to your provider** before resuming or beginning a new workout routine while pregnant or after giving birth. Below are tips on being physically active after giving birth:

Additional Resources:

Navy [Pregnancy and Postpartum Physical Training and Nutrition Guidebook](#)

Marine Corps [Postpartum Physical Training Guide](#)

Postpartum Recovery after [Pregnancy Loss](#)

1

VERIFY WITH YOUR PROVIDER: Exercise is both safe and important in all but a few complicated pregnancies.

2

SET REALISTIC GOALS: Set challenging, but achievable goals to push yourself without getting discouraged. Remember you can adjust goals as you progress! Start with walking at a minimum and aim to safely build back up to previous fitness routines, or the nationally recommended mild to moderate exercise in 30 minute – 60 minute sessions 5x a week.

3

FIND WAYS TO GET ACTIVE WITH YOUR BABY: It is often difficult to find time for exercise with a new baby in your home. Brisk walks with the stroller or while "baby wearing" (wearing / carrying your baby in a carrier) are both great ways to be active. However, note that jogging strollers are not considered safe until a baby is 6 months old. [Stroller Warriors](#) is a running club for military families and postpartum women. Many Military and Family Support Centers also offer "Mommy and Me" yoga classes.

4

DON'T DO TOO MUCH, TOO SOON: Listen to your body and slow down if you need to. If your post-delivery vaginal discharge develops a foul odor, becomes very heavy (soaking a pad an hour with blood), notify your provider.

5

MAINTAIN A HEALTHY DIET: The right food can keep you energized for a new exercise program. If breastfeeding, remember to increase your daily caloric intake by 500 calories a day (approximately 2,400 calories total). For more on nutrition while breastfeeding, [click here](#).

FOR BREASTFEEDING MOTHERS: Regular physical activity does not impact breastmilk production. If you are lactating (producing breastmilk), consider feeding your infant or expressing milk before exercise to avoid discomfort.

Postpartum Fitness Test Waivers

Physical Fitness Expectations

Maintaining physical fitness, during and after pregnancy, is an important way to look after your physical and mental well-being. However, service members are exempt from formal physical fitness and body composition standards **during pregnancy and for 12 months following delivery** (NAVADMIN 129/21, MARADMINS Number: 066/21C).

After those 12 months, Navy and Marine Corps women who have given birth are expected to **meet physical fitness and body composition standards at the next scheduled unit evaluation**, unless waved for a medical condition. The charts on the following pages explain the Physical Fitness Assessment (PFA)/Fitness Test schedule following delivery for the Navy and Marine Corps.

To read more about Navy Pregnancy and Parenthood guidance and policies, [click here](#).

Navy Wellness PFA for Postpartum Sailors

Note: The following policy does not apply to Marines. Postpartum Sailors are required to participate in a **“wellness PFA” or unofficial PFA**, including the Body Composition Assessment (BCA) and Physical Readiness Test (PRT), between **six to nine months after giving birth** to provide a personal assessment and command visibility of current health and fitness levels. Postpartum Sailors will be screened by a healthcare provider or Authorized Medical Department Representative (AMDR) at six months postpartum, and if the Sailor is not medically cleared, they will be rescreened until they are **medically cleared to participate** in the wellness PFA. **Within 10 days** of receiving medical clearance, the service woman **must coordinate with a Command Fitness Leader (CFL)** to schedule the wellness PFA.

If a Sailor passes the wellness PFA, they can **return to normal command or unit physical training**. If they fail, they will be connected to nutrition and fitness resources to assist with postpartum recovery and return to full duty. Wellness PFA **failure will not count as an official PFA failure** or result in negative administrative action.

Maternity Uniform Regulations

Postpartum service women are expected to wear regular uniforms upon returning from maternity convalescent leave; however, **COs may approve the wear of maternity uniforms up to six months from the date of delivery** based on healthcare provider diagnosis and/or recommendations.

Postpartum Sailor PFA Cycle Schedule

Navy PFA Cycle After Giving Birth

Postpartum Sailors will be medically screened for participation in the wellness PFA by their healthcare provider or AMDR at six months postpartum. See the previous page for more details.

Delivery Month	Six Month Postpartum Medical Screening	Participation Cycle	Next Required PFA Cycle Begins
January	July	2	July
February	August	2	July
March	September	2	July
April	October	2	July
May	November	2	July
June	December	2	July
July	January	1	January
August	February	1	January
September	March	1	January
October	April	1	January
November	May	1	January
December	June	1	January

The Navy is **conducting a pilot** of an adaptation of the evidence-based [Army Pregnancy and Postpartum Physical Training \(P3T\) program](#) with three local commands at Naval Station Norfolk.

Postpartum Marine Fitness Test Schedule

Marine Corps Fitness Tests After Giving Birth

Postpartum Marines are exempt from the Physical Fitness Test (PFT) and Combat Fitness Test (CFT) for 12 months after the birth event. Following the 12-month exemption, a Marine birthparent is expected to meet physical fitness standards at the next regularly scheduled unit physical fitness evaluation (PFT or CFT).

Delivery Month	Upcoming Fitness Test Component	Upcoming Fitness Test Component Completed By
January	PFT	By 30 June the following year
February	PFT	By 30 June the following year
March	PFT	By 30 June the following year
April	PFT	By 30 June the following year
May	PFT	By 30 June the following year
June	PFT	By 30 June the following year
July	CFT	By 31 December the following year
August	CFT	By 31 December the following year
September	CFT	By 31 December the following year
October	CFT	By 31 December the following year
November	CFT	By 31 December the following year
December	CFT	By 31 December the following year

Postpartum Marines have the **option of rowing 5,000 meters** as an **alternative** event for the **three-mile run** in the PFT if authorized by their primary care provider and Commanding Officer/Officer in Charge.

Incontinence and Pelvic Floor Exercises

URINARY INCONTINENCE

Pregnancy and childbirth **may affect the urinary tract** and the surrounding muscles. The pelvic floor muscles that support the bladder, urethra, uterus (womb), and bowels may become stretched, weaker, or damaged. This extra stress or pressure **can cause urinary incontinence** (lack of control over urinating) **or leakage** when **exercising** or when you **laugh, cough, or sneeze**.

PELVIC FLOOR PHYSICAL THERAPY

Pelvic floor physical therapy can help treat issues due to pelvic floor muscles stretching or damage caused during pregnancy or childbirth. These issues include:

- Urinary incontinence
- Urinary frequency or urgency
- Pain with sexual activity
- Scar pain (lower abdominal from a c-section or near the vaginal opening from a vaginal delivery)
- Low back or pelvic pain

If you continue to have these issues after 6 weeks postpartum, talk to your provider for exercise recommendations or for a physical therapy referral.

PELVIC FLOOR EXERCISES YOU CAN TRY AT HOME

To identify your pelvic floor muscles, stop urination in midstream. Once you've identified your pelvic floor muscles you can do the exercises in any position, although you might find it easiest to do them lying down at first.

Kegels

Imagine you are sitting on a marble and tighten your pelvic floor muscles as if you're lifting the marble. Try it for **three seconds** at a time, then relax for a count of three.

Be careful not to flex the muscles in your abdomen, thighs or buttocks. Avoid holding your breath. [Click here](#) for more information on Kegel exercises.

Elevator/ Reverse Elevator

This activity uses Kegels in an advanced set: imagine you are going up three floors on an elevator then back down:

- 1st floor is a **small squeeze** for 3 seconds
 - 2nd floor is a **medium squeeze** for 3 seconds
 - 3rd floor is a **strong squeeze** for 3 seconds
- After going from the 1st floor to the 3rd floor, then reversing back down to the 1st floor, relax your muscles. This is one set.

Contraception after Pregnancy and Delivery

SEX AFTER GIVING BIRTH

It is recommended that you do not place anything in your vagina (i.e. having sex, using tampons) until any tears you had from delivery are healed and you feel physically and emotionally ready. This **often takes about 4-6 weeks after giving birth** and this guidance aims to reduce pain, allow healing of tears, and ensure physical and emotional wellness before resuming sexual activity. If you are not breastfeeding, ovulation and fertility may return 4-6 weeks after delivery. If you are exclusively breastfeeding, ovulation and fertility may be delayed and unpredictable.

During postpartum intimacy, **you may experience fatigue, vaginal dryness, pain, and reduced sexual desire**. To ease discomfort during sex, seek pain relief (empty your bladder beforehand, take a warm bath), use lubricant to ease vaginal dryness, and talk to your partner about alternatives to vaginal intercourse. There's more to intimacy than sex, especially when adjusting to life with a new baby. [Click here](#) to learn more about sex after giving birth.

BIRTH SPACING

The **recommendation for birth spacing is two years**. Back-to-back pregnancies (less than 2 years apart) carry risk of preterm delivery and low birth weight for the second pregnancy.

CONTRACEPTION AFTER GIVING BIRTH

Using hormonal **contraceptive medications containing estrogen** during the first 6 weeks after delivery can **increase your risk of blood clots by 3-6x**. During this time, you should avoid estrogen-containing birth control methods, which include most birth control pills, the patch, and vaginal ring.

BREASTFEEDING AND CONTRACEPTION CONSIDERATIONS

If breastfeeding, there are **many options for contraception that won't increase your risk for blood clots or negatively affect your milk supply**, including: the shot (Depo-Provera), Mini Pill (Progestin only pill), hormonal (Mirena, Skyla, etc.) and copper IUDs (Paraguard), implant (Nexplanon), condoms, and diaphragm. Once milk supply is well established, some women may be able to use estrogen-containing contraception without affecting breastfeeding and milk supply.

WHAT ARE THE **BENEFITS** OF **BREASTFEEDING**?

FOR YOU

- Powerful emotional and physical connection to your child
- Quicker recovery from childbirth (burn calories and lose weight to prepare for postpartum fitness tests)
- Money savings by avoiding cost of formula
- Breastfeeding releases hormones which help your uterus return to its pre-pregnancy size and may help to decrease uterine bleeding
- Lowers risk of breast and ovarian cancer and osteoporosis

FOR YOUR CHILD

- Superior nutrition (particularly colostrum or “liquid gold” produced in the first days after birth)
- Increased resistance to respiratory and gastrointestinal infections
- Decreased risk of asthma, allergies, and lactose intolerance
- Breastmilk has antibodies which help your baby fight off viruses and bacteria
- Exclusive breastfeeding helps to decrease your baby’s risk of diabetes, obesity, asthma, allergies, Sudden Infant Death Syndrome (SIDS), and certain cancers

HOW DO I **ENSURE SUCCESSFUL** **BREASTFEEDING**?

- Let your provider know you would like **IMMEDIATE** and **UNINTERRUPTED SKIN-TO-SKIN CONTACT** with your infant following birth to initiate breastfeeding.
- Do not give your infant formula, unless medically indicated.
- Try to establish a good milk supply prior to introducing bottles or pacifiers to the infant as some evidence suggests bottles may cause difficulty in latching.
- Remember to consume an additional 500 calories per day when breastfeeding.

Exclusive breastfeeding is recommended for the first six months of life if possible, but even if you can only breastfeed for a few days, weeks, or months, breastfeeding is beneficial and recommended.

Many women struggle with breastfeeding or pumping, and it’s okay to discuss this with your support network or a medical professional. [Click here](#) for additional information.

Postpartum Blues and Depression

Your **BODY** and **MIND** go through **MANY CHANGES** during and after pregnancy...

Many women experience **sadness or anxiety after pregnancy**. However, some women face a longer or more serious period of depression. **POSTPARTUM BLUES** or “baby blues” symptoms typically start to go away within the first two weeks after giving birth. If symptoms last longer than two weeks, it is more likely postpartum depression (PPD). Both the “baby blues” and PPD are caused by changes in hormone levels. In the hours shortly after birth, estrogen and progesterone levels see sharp decreases; these changes may trigger depression. Many women feel very tired after giving

birth **and it can take weeks for a woman to regain her normal strength and energy**. A lack of support, stressful life events, and a history of depression can all increase the risk of postpartum depression.

POSTPARTUM DEPRESSION can persist for weeks or months and may even start during pregnancy or months after the baby is born. Every pregnancy is different – you may experience postpartum blues or depression with one child and not another. Whatever symptoms you are facing, **you do not have to go through it alone**. Talk to your provider and a loved one – see more information [here](#).

SYMPTOMS of POSTPARTUM DEPRESSION: *Last weeks or months and are more severe symptoms than postpartum blues. Symptoms typically disrupt your ability to function or to carry out daily responsibilities.*

- Constant fatigue or exhaustion
- Depressed or sad mood
- Loss of appetite or overeating
- Confusion or difficulty concentrating
- Feelings of worthlessness or incompetence
- Lack of interest or resentment towards your baby
- Not feeling connected to your baby
- Anxiety or panic attacks
- Fear of harming yourself or your baby
- Exaggerated mood swings
- Withdrawal from friends, family, and activities you used to enjoy

[Click here](#) to access a **Postpartum Depression Guide** for more information on symptoms and treatment options.

CALL FOR HELP IMMEDIATELY IF...

If you have **thoughts of harming yourself or your baby**, contact a **health care professional IMMEDIATELY**. You can contact the Military Crisis Line 24/7 by calling 1-800-273-8255 or chat online [here](#).

Getting Help for Postpartum Depression

CALL YOUR PROVIDER IF YOU MEET ANY OF THE FOLLOWING CRITERIA

- Your **postpartum blues** do not go away **after 2 weeks**
- Symptoms of depression start **getting more and more intense**
- Your postpartum depression symptoms **last more than 2 weeks**
- You **cannot care for yourself** or your baby (eating, sleeping, bathing)
- You have thoughts about **hurting yourself or your baby**

If you **feel uncomfortable** talking about your symptoms with your provider, **ask your partner or a loved one to call for you**. Your provider can **refer you to a mental health professional** for more help and tell you about treatment options, such as therapy or medication

Not sure how to talk about your symptoms with your provider?

Consider using this [Mom Mental Health Checklist](#) created by the non-profit Postpartum Progress.

WHAT CAN I DO AT HOME TO FEEL BETTER IN ADDITION TO TALKING TO A PROVIDER?

REST AS MUCH AS YOU CAN. Sleep when the baby is sleeping and reduce caffeine, sugar, and alcohol intake before bed for better quality sleep.

DON'T TRY TO DO EVERYTHING BY YOURSELF. Ask your partner, family, or friends for help to spread out the work.

TALK ABOUT WHAT YOU ARE GOING THROUGH with your partner, loved ones, or with other mothers so you can learn from their experiences.

TRY TO AVOID MAJOR LIFE CHANGES right after giving birth as they can cause unneeded extra stress. When big changes can't be avoided, try to arrange support ahead of time.

Depression can also impact those **who have suffered a miscarriage**. More information on early pregnancy loss can be found [here](#) and [SHARE](#) offers pregnancy loss support through support groups and online resources.

Policies and Instructions

Postpartum Deployment

- Navy and Marine Corps personnel are **non-deployable for 12 months postpartum**.
- Service members under this non-deployable status are also **exempt from short underway (work-ups) and temporary additional duty (TAD) periods** that inhibit ability to breastfeed or care for their child(ren) for more than a normal workday or shift.

However, Navy and Marine Corps women who have recently given birth may request to deploy sooner than 12 months postpartum if they wish.

Breastfeeding Instruction

- **Official policy supports breastfeeding** and states that commands are required to ensure breastfeeding staff have **access to a lactation room** within a reasonable proximity of their workspace.

A separate toilet space is unacceptable to serve as the lactation room, and the lactation room must include access to running water and electrical outlets.

Postpartum Physical Fitness

- Navy and Marine Corps service members are **EXEMPT from physical fitness and body composition standards for 12 months after giving birth**.

For specifics regarding the postpartum return to physical fitness and the PFA cycle after giving birth, see page 4 of this guide.

Navy and Marine Corps Family Support Resources

Navy Resources

LifeSkills: Parent Education and Parenting Resources ([Click Here](#))

This curriculum includes workshops focused on using conflict to direct positive change, improving communication to strengthen relationships through mutual respect and understanding, and using mindful thought management and problem solving strategies. Topics include communication, parenting, stress management, and anger management.

New Parent Support Home Visitation Program (NPSHVP) ([Click Here](#))

The NPSHVP seeks to empower parents to meet the challenges of parenthood while maintaining a military lifestyle. The program offers a variety of services, including prenatal health and nutrition consultation, breastfeeding education, early child development education, parenting skills, and home visitation services.

Navy Baby Safe Sleep Mission ([Click Here](#))

The Navy Baby Safe Sleep Mission is to reduce the sleep-related child fatality incidents within the military community by educating parents on safe sleep practices for newborns.

Fleet and Family Support (FFSP) Program Resources ([Click Here](#))

There are many resources available to help families navigate the physical, emotional, interpersonal, and logistical demands of the military lifestyle. FFSP offers resources to support challenges associated with deployment, financial needs, relocations, and more.

Marine Corps Resources

New Parent Support Program (NPSP) ([Click Here](#))

Through the NPSP, families can access home visits for individualized support, group parenting classes for newborns and toddlers, and interactive playgroups. Parents can also receive education on postpartum health, child development, and parenting.

Marine Corps Community Services (MCCS) ([Click Here](#))

MCCS provides information and services across military benefits, career advancement resources, education opportunities, mental health support, family activities, and parenting guidance, as well as fitness and recreation resources.

Family Team Building ([Click Here](#))

This program includes education and exercises to promote individual and family development and is designed specifically to meet the needs of Marine Corps families and the stresses of the military lifestyle. The training programs focus on topics and concerns related to overall family function, relocation, deployment, military separation, communication, and relationships.

Mobile Applications

Peanut

Use for: Building an in-person and online community of new moms

Peanut is designed to help new moms ease into the postpartum and parenting experience by connecting them with one another. Peanut offers a platform for users to discuss everything from mental health challenges to diapers. In addition, you can find other new parents near your location with similar interests to meet in person.

Glow Baby

Use for: Daily tracking of your baby's habits

This app offers tools to track when your baby eats, their sleep habits, and diaper changes, as well as pumping and your own rest and activity time. Inputs are translated into visual data to help you see how habits evolve overtime.

Eve

Use for: Period tracking and information on sex and relationships

This app tracks periods and offers predictions for your menstrual cycle. Additionally, Eve offers a health log to track mood, sexual activity, and any physical symptoms with recommendations for anything abnormal.

Headspace

Use for: Support managing anxiety and relaxing.

Headspace teaches skills of mindfulness and meditation to reduce stress and anxiety and improve sleep, focus, and overall mood. The app includes tools such as "sleepcasts," soothing experiences to lull you to sleep, and "SOS" meditations designed to help during moments of crisis.

Mobile Applications

Navy Pregnancy and Parenthood

Use for: Navy guidance related to parenthood such as assignments, separation, and standards of conduct

This app helps Servicemembers understand the personal and professional responsibilities that come with parenthood while serving in the Navy. This app also captures pertinent regulations, instructions, benefits and references from a variety of sources in one easy-to-use app.

Navy Physical Fitness Assessment App

Use for: Preparation for the Physical Readiness Test (PRT)

The app offers current guidance regarding all aspects of the Navy's Physical Readiness Program, including information on appropriate nutrition, health, fitness, aerobic capacity, muscular strength, muscular endurance, and body fat composition.

Navy Operational Fitness and Fueling Series (NOFFS)

Use for: Performance training support and physical fitness guidance

This app provides exercise programming designed to replicate the activities Sailors conduct in their operational duties: lifting, pushing, pulling, and carrying. This resource also includes injury prevention stretches and nutritional guidance to support safe training.

Decide + Be Ready

Use for: Help making a decision about the best contraceptive method for you

This app supports military women in their decision-making related to contraception, taking into consideration that service women, when deployed or working in uniquely challenging environments, may also choose to use one of the birth control methods to manage or even skip menstrual periods.

Breastfeeding Resources

Breastfeeding and Your Family

Research shows that breastfeeding [provides many health benefits](#) for you and your baby; however, it also can be difficult to manage breastfeeding in today's hurried world. The decision to breastfeed is a personal one and every mother's experience is different. As a new mom, **you deserve support no matter how you decide to feed your baby!**
