Flu Activity and Surveillance

Laboratory:
There were seven laboratory positive influenza results among DON beneficiaries during Week 40 (slightly below seasonal baseline). More

Antivirals:
There were 13 influenza-specific antiviral (AV) medications prescribed to DON beneficiaries this week (all oseltamivir). Influenza-specific AV prescriptions this week were equal to the seasonal baseline. More

Influenza-Like Illness:
3.2% of outpatient medical encounters were due to influenza-like illness (ILI); this is equal to the seasonal baseline. More

Vaccination

14.8% of Navy and 12.6% of Marine Corps active duty service members have received an influenza vaccine (as of 4 October 2014). More

Reminder: The DOD’s personnel vaccination goal is 90% vaccine coverage by 15 December 2014.

Severity Indicators

Inpatient:
There were 18 inpatient influenza tests performed during Week 40; none were positive. There was one inpatient AV prescription dispensed this week and one case was reported to DRSi. More

Coinfections:
No coinfections were identified among DON beneficiaries during Week 40. More

Select Populations

Active Duty & Recruits:
In Week 40, there were two laboratory positive influenza cases among DON active duty service members and no laboratory positive influenza cases among DON recruits. More

NHRC reports febrile respiratory illness rates are at or below expected values for DON basic training centers. More

Children:
Laboratory influenza rates in the 0-4 and 5-17 age groups were 0.0 and 0.34 per 100,000, respectively. There were two AV prescriptions dispensed to children this week (15.3%). More
**Laboratory:**
- There were seven positive laboratory influenza results identified among DON beneficiaries in Week 40 (three Type A, two Type B, one dual infection, and one unspecified).
- Top facilities this week were NH Jacksonville (two) and NH Guam-Agana (two).
- During Week 40, 4.6% of all influenza tests performed were positive.
  - This is higher than the percent of tests with positive results in Week 40 of last season (2.7%).
- The number of cases this week is below seasonal baseline.
- In Week 40, six cases were positive by rapid testing and one was positive by PCR.

**Antivirals:**
- There were 13 influenza-specific antiviral (AV) medications prescribed to DON beneficiaries this week (all oseltamivir).
- Antiviral prescriptions during Week 40 were below seasonal baseline.
- One of the antiviral prescriptions was in the inpatient setting (7.7%).
Inpatient Surveillance:
- There were 18 inpatient influenza tests performed among DON beneficiaries in Week 40; none were positive.
- Among ER admissions, 8.7% of medical encounters contain ILI ICD-9-CM diagnostic codes, which is below the seasonal baseline.

Immunizations

Vaccination Coverage:
- No laboratory positive active duty cases (n=2) this week were vaccinated more than 14 days prior to infection.
- 14.8% of Navy and 12.6% of Marine Corps active duty service members have received an influenza vaccine.
  - Among US Fleet Forces active duty personnel, 11.7% have received an influenza vaccine.
- 22.9% of Navy and 10.2% of Marine Corps recruits have received an influenza vaccine.

Severity Indicators

Inpatient Surveillance:
- There were 18 inpatient influenza tests performed among DON beneficiaries in Week 40; none were positive.
- There was one AV medication prescribed in the inpatient setting this week.
  - This week’s case was a Navy male active duty service member at NMC San Diego who was prescribed oseltamivir.
- There were one inpatient cases reported to DRSi this week.
  - This week’s case was a 45+ male active duty service member with no evidence of vaccination reported by NMC San Diego. This case was also captured by laboratory (outpatient) and pharmacy surveillance.

Coinfections:
- There were no bacterial coinfections identified among DON beneficiaries in Week 40.
Active Duty
- There were two positive laboratory influenza results among DON active duty service members in Week 40.
- This week’s active duty cases were not vaccinated.
- Both cases were Navy service members tested in outpatient facilities. One female service member was Type B positive by rapid testing at NH Lemoore and one male service member was Type B positive by PCR testing at NMCP San Diego.
- Four active duty service members received AVs during Week 40.
  - Two (50.0%) were Navy and two (50.0%) were Marine Corps.
  - This week’s inpatient prescriptions were dispensed at NMC San Diego (two), NBHC Port Hueneme, and OP Forces—NH Camp Lejeune.

Recruits:
- There were no positive laboratory influenza results among DON recruits in Week 40.
- There were no AVs dispensed to a recruit during Week 40.

Children:
- The rates of positive influenza results in the 0-4 and 5-17 age groups in Week 40 were 0.0 and 0.35 per 100,000, respectively.
- There were two AV medications prescribed to children during Week 40. The number of AVs dispensed to children during Week 40 was below seasonal baseline.

Other Age Groups:
- During Week 40, the laboratory influenza rates among the 18-44 and 45+ age groups were 0.35 and 0.8 per 100,000, respectively.

In the News
- CDC reports the US had low levels of influenza overall between 18 May and 20 Sept 2014 with sporadic cases across the country. More
- WHO reports that influenza B is co-circulating with respiratory syncytial virus (RSV) in tropical countries of the Americas. More
- Study indicates physicians are under-prescribing influenza antivirals and over-prescribing antibiotics to influenza outpatients. More
