Weekly Highlights

- Overall influenza activity in the DON is low.
- Laboratory-positive cases and dispensed antivirals are low and the trend has decreased over the prior 2 weeks.
- No inpatient laboratory-positive cases were identified and activity for inpatient dispensed antivirals (N=3) is low.
- The percent of outpatient visits for ILI are elevated and the trend has remained the same over the prior 2 weeks. The COVID-19 pandemic may affect healthcare seeking behavior, impacting ILI levels.

Overall Burden (Data Lagged, Week 13)

DON Total Influenza Cases from Laboratory, Pharmacy and Encounter Data

Supporting Surveillance

DOD Seasonal Influenza Surveillance Summary (AFHSB) Week 13 highlights:

- Influenza activity continued to decrease among beneficiaries to low activity levels.
- ILI activity decreased slightly, but remained high.
- Access the full report here.

Data from NH Oak Harbor, NH Bremerton, NHC Lemoore, AMC Madigan, AHC Monterey, AHC Fairchild, Mountain Home AFH, and Travis AFB are not captured due to the transition to MHS GENESIS.
Laboratory Surveillance

- **Burden:** Laboratory-positive influenza cases (N=57) are low and below the seasonal threshold. The trend over the past two weeks has decreased. The number of laboratory-positive cases decreased from the prior week by 50%.
- **Specimens:** Overall percent positivity is 4.4%, with 56.9% of cases identified as influenza A.
- **Severity:** No inpatient laboratory-positive cases were identified.
- **Age:** Children ages 0-4 had the highest rate of laboratory-positive influenza cases at 3.9 cases per 100,000 persons, while adults ages 18-44 had the second highest rate at 3.6 cases per 100,000 persons.
- **Location:** NMC Camp Lejeune (N=23), NH Beaufort (N=6), NH Jacksonville (N=6), and NHC Cherry Point (N=5) had the highest number of laboratory-positive cases for the week.

Data sources: HL7-formatted CHCS chemistry and microbiology databases. Denominators for rates are from M2 eligibility records.
Antiviral Surveillance

- **Burden:** Dispensed antivirals (N=40) are low and below the seasonal threshold. The trend over the past two weeks has decreased. The number of dispensed antivirals decreased from the prior week by 50.6%.
- **Severity:** 3 inpatient dispensed antivirals were identified in sponsors (N=2), and a spouse (N=1).
- **Types:** Dispensed AVs consisted of 3 baloxavir and 37 oseltamivir.
- **Location:** NMC San Diego (N=9), NHC Cherry Point (N=5), NH Pensacola (N=4), NMC Camp Lejeune (N=3), and NH Jacksonville (N=3) had the highest number of dispensed antivirals for the week.

Data sources: HL7-formatted CHCS chemistry and microbiology databases.

Influenza-Like Illness (Data Lagged, Week 13)

- **All outpatient:** Influenza-like illness (ILI) activity is elevated. The percentage of outpatient medical encounters due to ILI was 4.7% in Week 13, above the surveillance threshold of 4.1%.
- **Note:** ILI activity is used to indicate the burden of ILI on healthcare resources.

Data source: CAPER

Outpatient Medical Encounters due to ILI, Week 13

Outpatient Antiviral Prophylaxis

- **Treatment:** The majority (85.3%) of antiviral prescriptions in Week 14 were for treatment of influenza or influenza symptoms.
- **Prophylaxis:** 14.7% (N=5) of antiviral prescriptions in Week 14 were for prevention of influenza or influenza symptoms.

Data source: HL7-formatted CHCS pharmacy databases

Outpatient Antiviral Prophylaxis Prescriptions
DON Active Duty and Recruits

- **AD Laboratory Cases:** 25 laboratory-positive cases were identified among AD Sailors (N=16) and Marines (N=9).
- **AD Dispensed Antivirals:** 13 dispensed antivirals were identified among AD Sailors (N=9) and Marines (N=4).
- **Recruits:** 2 laboratory-positive cases and 2 dispensed antivirals were identified among recruits.
- **Location (Active Duty):** Laboratory-positive cases among active duty Sailors or Marines occurred most frequently at NMC Camp Lejeune (N=6), NHC Cherry Point (N=4), NH Beaufort (N=3), and NH Jacksonville (N=3).
- **Location (Recruits):** Laboratory-positive cases among recruit Sailors or Marines occurred most frequently at NH Beaufort (N=2).
- **Vaccination Status:** 25 AD laboratory-positive cases (100.0%) had a vaccination record more than fourteen days prior to infection.

Data Sources: HL7-formatted CHCS chemistry, microbiology and pharmacy databases, MRRS and ITS.

### In the News

- The CDC is reporting Influenza A viruses are now the most commonly reported influenza viruses this season. [Details.](#)
- The CDC is reporting ILI visits for all regions are above their baselines. [Details.](#)

### Methods and Data Sources

The Influenza SITREP methods can be found [here.](#)

- HL7 formatted CHCS data from microbiology and chemistry data are available from 2004 to present. HL7 formatted CHCS data from pharmacy databases are available from 2006 to present.
- Data from NH Oak Harbor, Bremerton, and Lemoore; AMC Madigan and AHC Monterey; and Fairchild, Mt. Home and Travis AFB are not captured due to transition to MHS GENESIS.
- ILI encounters are defined as those where an ILI ICD-10-CM code, per AFHSB, is found in any diagnostic position. The ICD-10-CM codes in the AFHSB definition include: B97.89, H66.9, H66.90, H66.91, H66.92, H6693, J00, J01.9, J01.90, J06.9, J09, J09.X, J09.X1, J09.X2, J09.X3, J09.X9, J10, J10.0, J10.00, J10.01, J10.08, J10.1, J10.12, J10.15, J10.8, J10.81, J10.82, J10.83, J10.89, J11, J11.0, J11.1, J11.01, J11.00, J11.1, J11.12, J11.18, J11.11, J11.82, J11.83, J11.89, J12.89, J12.9, J12.1, J18.1, J18.8, J18.9, J20.9, J40, R05, R50.9
- The “Overall Burden” and ILI figures are lagged one week due to encounter data availability.
- Prepared by the EpiData Center on 07APR20.
