Introduction

This Cummins® Onan® Commercial Mobile Generators Pocket Guide offers basic information on our line of Diesel, Gasoline, LP, Hydraulic and PTO generator sets from 2 to 40 kW. More information about all models, including complete specifications, the latest news releases, generator set installation outline drawings, accessories and much more can be found at www.cumminsonan.com/cm.

Service Support

Cummins Onan generator sets are supported by the largest and best-trained worldwide certified distributor/dealer network in the industry. That means wherever your journey takes you, you can feel confident a Cummins Onan distributor/dealer is nearby. The largest network in the business makes it easier to get genuine parts, quality service and expert installation assistance when and where you need them. Our extensive training and certification process demonstrates our strong commitment to exceptional product service and support. To find the nearest authorized Cummins Onan generator certified dealer, visit www.cumminsonan.com/locator.
Warranty

The Cummins Onan Limited Warranty for Commercial Mobile Generators covers the generators for a period of two (2) years or 2,000 hours, whichever occurs first, for QG (5.5, 6.5 and 7 kW), SD and QD lines, one (1) year or 1,000 hours, whichever occurs first, for QG (2.5, 2.8, 3.6 and 4 kW) lines and five (5) years or 1,000 hours, whichever occurs first, for HG and PTO lines from date of delivery to the first retail purchaser. This coverage applies to the original owner and all subsequent owners for the duration of the coverage at no additional charge or deductibles for the customer. Parts, labor including diagnostic labor, limited travel (emergency vehicles only), and removal and reinstallation are covered.

The warranty is administered by the Cummins Onan distributor/dealer network that, in most cases, is the same network that administers the Cummins Engines warranty, providing a one-stop shop for your power needs and service.
Our philosophy is to take care of our customers at the first point of contact and not to defer them to other suppliers’ warranty or service centers. Our extensive worldwide network is highly trained with certification requirements. In addition to product training, Cummins emphasizes the need to take care of the customer through programs such as QuickServe and Mobile QuickServe (providing emergency service 24 hours a day, seven days a week in the U.S. and Canada) and PowerCare (a planned maintenance program), providing owner peace of mind.

**Maintenance and Parts**

Green Label replacement and maintenance products provide dependable power and performance for the life of your generator. For genuine Green Label air filters, spark plugs, oil filters, tune-up kits and more, see your Cummins Onan authorized service and parts dealer. To locate the dealer nearest you, visit www.cumminsonan.com.
Accessories and Options

Cummins Onan offers a variety of commonly used accessories and options. Following is a partial list of categories of accessories and options available. For accessories catalogs or model specification sheets, visit www.cumminsonan.com.

Accessories available include sound shields, digital displays, harnesses, AC transfer switches, fuel system kit, batteries, mufflers, exhaust components, tail pipes, fan conversion, fuel water separator, ducting kit and pipe adapters.

Options that are available when you order the generator (factory-installed) include 120, 115/230 or 120/240 V AC, 1 or 3 phases, pusher or suction fan and others. Not all accessories or options are available for every model; visit www.cumminsonan.com for complete specification information.
Diagnostics

The diagnostic features were designed with the customer in mind. Most generators will trip a breaker when something has gone wrong; however, you’re never really sure what happened. With the information the diagnostic indicator provides, knowing what happened may make the difference between enjoying your weekend outing or waiting for a service call. If a service call is required, the knowledge you have to give the service technician will expedite the repair and get you on your way as quickly as possible.

Cummins Onan generators have a number of self-protective shutdowns including high engine coolant temperature, high exhaust temperature, low oil pressure, over speed, over voltage and many others.
Starting Procedure

The Energy Command 30 (EC-30) is an Automatic Generator Starting (AGS) System that provides both automatic and manual control on Onan Diesel, Gasoline and Liquid Propane (LP) engine driven AC generators (referred to in this manual as a genset). EC-30 also provides critical system information such as the battery state-of-charge, key operational information such as quiet time, genset service and fault messages. EC-30 automatically starts the genset when the battery becomes discharged or when there is a run request from an external device such as a heating ventilating and air conditioning (HVAC) system. When the battery is charged, or the HVAC system no longer requires power, the genset is automatically turned off.
Using the START/STOP switch
Works exactly like the genset switch. If the genset switch has a run light and flashes diagnostics, the EC-30 run light will also be on when the genset is running, flash during preheat and flash genset fault messages.

Using the up/down switch
This key is used to scroll through display choices and change values that have been set.

Using ENTER
This key is used to store values that have been changed, and to respond to display commands.

Using SET
This key is used to display and change settable values, such as: Local Time, and Quiet Time Start and End (QT Start and QT End).

Using AUTO GEN
This key selects genset operating mode:
- MANUAL: Operator start/stop.
  No automatic.
- AUTO ON: Automatic start/stop available.
- QUIET ON: Automatic start/stop not available during quiet time.

Features
- Lower noise, vibration, harshness (NVH)
- Automatic glow plug eliminates preheat time uncertainty
- Self-diagnostic capability simplifies troubleshooting
- Convenient, top-mounted switches and coolant level check/fills
- Complete, integrated package for easy, low-cost installation
- Service and maintenance points accessible through side service door
- 4A battery charging DC alternator
- Brush type alternator
- Over voltage, low oil pressure, over temp, over speed and overload safeties
- Tested at extremes of temperature -20° F (-29° C) to 120° F (49° C) for starting and operation
- Two (2) years or 2,000 hours warranty coverage
- U.S. EPA Tier IV

• Computer-controlled constant-speed operation
• Unique sound-controlled housing and sound shields minimize noise and deliver better sound quality
• Four-point semifocalized internal mounting system greatly reduces vibration
• Self-diagnostic capabilities simplify troubleshooting
• Optional Cummins Onan digital display provides user-friendly diagnostics including extensive engine and alternator information, self-diagnostic features and text display
• Service and maintenance points accessible through easy-latch side service door
• Control panel mounted switches
• Automatic glow plug eliminates preheat time uncertainty
• Products supported by worldwide certified distributor/dealer support network

HG 6000/8000/10000 • Hydraulic

Dimensions, in (mm)
Length 31 (787) x Width 16 (4050) x Height 14 (350)

Weight, lb (kg)
247 (112)

Features
- Cummins Onan custom-engineered hydraulic generator set system
- High motor starting capability
- Meets NFPA 120° F (49° C) ambient* standard
- Single-side serviceability
- Powder-coated steel housing/multiple air inlets (5)
- 4-point vibration isolated mounting system
- Digitally controlled pump flow for minimal voltage and frequency variation
- Hydraulic circuit has over speed and under speed protection
- Five (5) years or 1,000 hours warranty coverage

*Cummins Onan tested for operation with cooling air inlet temperature up to 120° F (49° C). Ambient is defined as the air temperature measured at the cooling air inlet to the set.

HG 20000/25000 • Hydraulic

Dimensions, in (mm)
Length 45 (1133) x Width 19 (490) x Height 17 (439)

Weight, lb (kg)
680 (309)

Features
• Cummins Onan custom-engineered hydraulic generator set system
• High motor starting capability
• Meets NFPA 120° F (49° C) ambient* standard
• Single-side serviceability
• Powder-coated steel housing/multiple air inlets (5)
• 4-point vibration isolated mounting system
• Digitally controlled pump flow for minimal voltage and frequency variation
• Hydraulic circuit has over speed and under speed protection
• Five (5) years or 1,000 hours warranty coverage

*Cummins Onan tested for operation with cooling air inlet temperature up to 120° F (49° C). Ambient is defined as the air temperature measured at the cooling air inlet to the set.

**Dimensions**, in (mm)
Length 26 (6620) x Width 14 (350) x Height 15 (381)

**Weight**, lb (kg)
301 (137)

**Features**
- Heavy-duty, field-proven design for long life
- Capped voltage regulation
- Environmental protection for adverse conditions
- Low harmonic distortion
- Dual mounting configurations
- Remote mountable solid state electronic voltage regulator
- 50/60 Hz switchable
- Precision-balanced rotating field generator set
  Epoxy impregnated windings with overcoat
- Brushless exciter
- Double-sealed, pre-lubricated bearings
- Air-cooled with shaft-mounted centrifugal fan
- Bi-directional rotation
- Skewed stator for low harmonic distortion
- Class H insulation, 180° C temp rating
- Reconnectable three phase and single phase
