SILVER SPRING, Md. - The annual Military Health System Research Symposium (MHSRS) is the Department of Defense's premier scientific meeting highlighting biomedical research and development focusing on the unique needs of the Warfighter.

The symposium provided a forum for showcasing and planning research to optimize the health and medical readiness of military members in operational settings. The four-day conference was held in Fort Lauderdale, Florida, August 17- 20.

This year's symposium focused on health care initiatives related to combat casualty care, military operational medicine, clinical and rehabilitate medicine and infectious diseases of military importance.

The Navy Medicine Research and Development enterprise was well represented with more than 70 posters and 25 podium presentations.

"It was a banner year for the Navy Medicine R&D enterprise at the 2015 MHSRS," said Capt. Jacqueline Rychnovsky, Commander
